- Mustain Billah Taj — ID: 220042166

Short Description

The Personal Expense Tracker is a full-stack web application designed to help users manage their personal finances by recording, categorizing, and analyzing their income and expenses. The system provides a centralized platform where users can track daily transactions, monitor spending patterns, set budgets, and define savings goals.

The application offers an interactive dashboard with visual summaries and charts that help users understand their financial activities and make informed decisions. Users can organize transactions by category, view historical records, and receive insights into their spending habits over time.

To be built with React for the frontend and FastAPI for the backend, the project will combine a responsive user interface with a secure and efficient backend architecture. By providing clear financial tracking and analysis tools, the system aims to improve personal budgeting, financial awareness, and long-term money management.

Main Features

- User registration and login with secure authentication.
- Add, edit, and delete income and expense transactions.
- Categorize transactions by type such as food, transport, shopping, bills, and others.
- Filter transactions by category and date range.
- Monthly summary dashboard showing total income, total expense, and current balance.
- Visual charts for spending analysis and category-based insights.
- Set monthly and category-based budgets.
- Automatic budget tracking and limit monitoring.
- Recurring transactions for salary, rent, subscriptions, or utility bills.
- Bill reminders and due-date notifications.
- Custom spending alerts when a user crosses a budget limit.
- Savings goal creation and progress tracking.
- Responsive and user-friendly interface for desktop and mobile devices.
